Software Maintenance

Agenda

- Software maintenance definition
- Software maintenance types of

Software Maintenance

- It is the process of changing the system after it has been delivered and is in use.
- The changes may involve simple changes to correct coding errors, more extensive changes to correct design errors or significant enhancement to correct specification errors or accommodate new requirements.

Software Maintenance

- There are four types of software maintenance:
  i. Corrective maintenance
  ii. Adaptive maintenance
  iii. Perfective maintenance
  iv. Preventive maintenance

Types of software maintenance

i. Corrective Maintenance:

- Corrective Maintenance is concerned with fixing reported errors in the software.
- Coding errors are usually relatively cheap to correct; design errors are more expensive as they may involves the rewriting of several programs components.
- Requirements errors are the most expensive to repair because of the extensive system redesign with may be necessary.

Types of software maintenance

ii. Adaptive maintenance:

- Adaptive maintenance means changing the software to new environment such as different hardware platform or for use with different operating systems.
- The software functionality does not radically change.

Types of software maintenance

iii. Perfective maintenance:

- Perfective maintenance involves implementing new functional or non-functional system requirements.
- These are generated by software customers as their organization business changes.

Types of software maintenance

iv. Preventive maintenance:

- Involves changing the software so as to avoid problems that are foreseen or to improve the ease of maintaining the software in future.
