UCU 103 – PRINCIPLES OF COMPUTING
CHAPTER 13: PRESENTATION APPLICATION
At the end of the chapter the learner shall be able to;

- Prepare a presentation in Microsoft PowerPoint
- Use pictures and objects
- Use animation in Microsoft PowerPoint
- Create organization charts using the Microsoft PowerPoint tools
- Create graphs using the Microsoft PowerPoint tools

13.1. Introduction

A **presentation program** is a software package used to display information in the form of a slide show. It has three major Components/functions:

1) an editor that allows text to be inserted and formatted,
2) a method for inserting and manipulating graphic images, and
3) a slide-show system to display the content

A presentation program is supposed to help both the speaker with an easier access to his ideas and the participants with visual information which complements the talk.

13.2. MS POWERPOINT

What is PowerPoint?

This is a complete presentation graphics package. It gives you everything you need to produce a professionally looking presentation. It enables you to express your ideas in graphics, text and objects all in one.

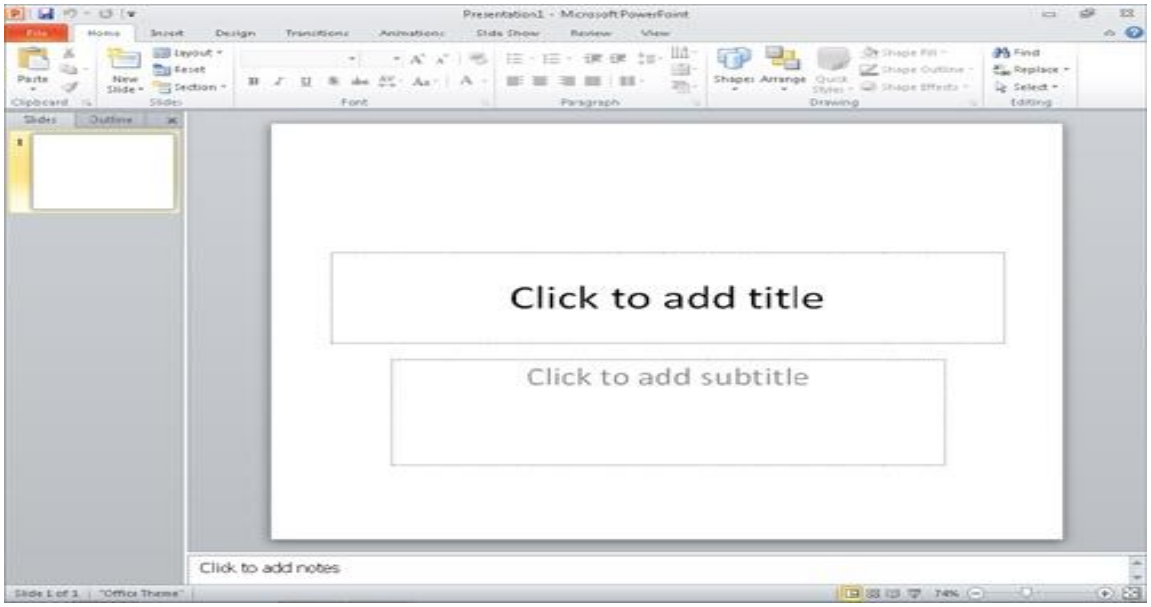

- **Presentation:** It is a collection of slides, handouts, speaker's note, and outline all in one file.
- **Slide:** Slides are individual pages of your presentation. Slides have titles, text, drawn objects, shapes, clip arts, and visuals created with other application.

13.3. Microsoft PowerPoint 2010 Environment

Using Microsoft PowerPoint 2010 is the easiest way to efficiently create effective presentations. The PowerPoint 2010 working environment, called the *user interface*, makes sophisticated presentation features accessible.

13.3.1. Starting PowerPoint

As with all Microsoft Office 2010 programs, the most common way to start PowerPoint is from the Start menu displayed when you click the Start button at the left end of the Windows Taskbar. When you start PowerPoint without opening a specific presentation, the program window appears, displaying a new blank presentation.

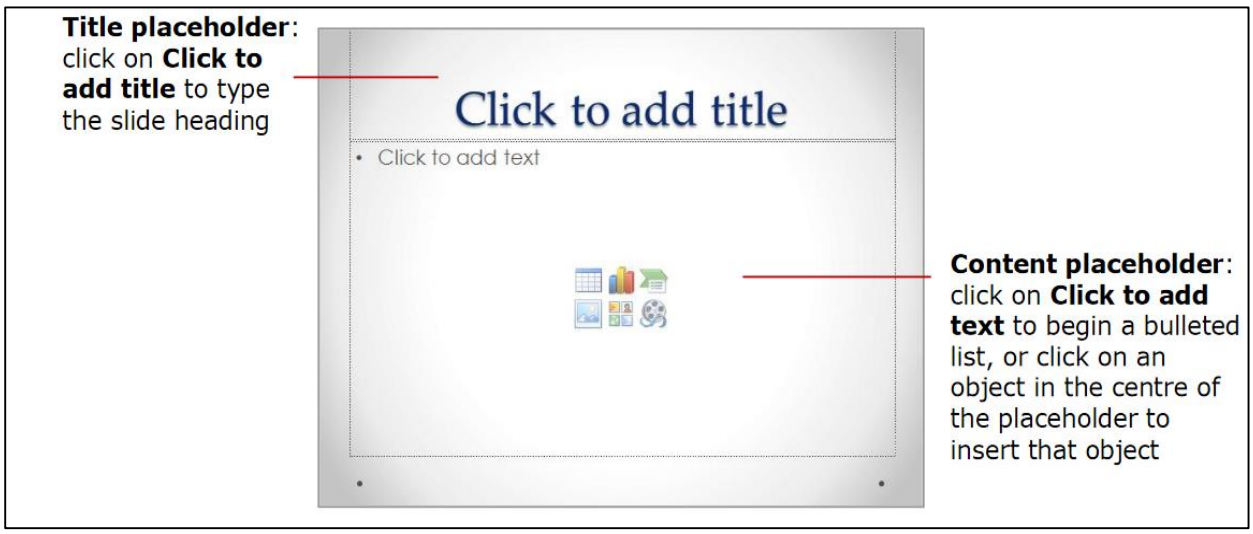

1) The first slide is called the Title page Slide:
2) Used for: title of the presentation and the presenters details

13.3.2. Slide Layouts

PowerPoint includes a range of slide layouts, complete with placeholders that allow you to quickly and easily insert text, headings and pictures and the like, onto a slide. Slide layouts contain formatting, positioning, and placeholder boxes for all of the content that appears on a slide.

Each slide layout is predesigned/built-in, and the gallery of available layouts should satisfy your slide design needs. But, if not, you can modify an existing layout or insert a blank slide and work from scratch.

A placeholder is a container that holds text and graphics, such as pictures, clip art, tables, charts and more. Each placeholder is positioned in certain areas of the slide, such as a text placeholder for the heading

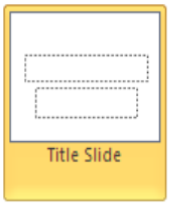

13.3.3. Slide Layout Gallery

The following predesigned slide layouts are available in the Layouts gallery.

Access by opening the Insert new slide icon;

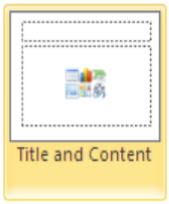

All slide layouts (except for the Blank layout) contain placeholder to help control the position of objects on a slide. Placeholders can hold clip art, pictures, charts, text and more.

The ***Title Slide*** layout is the default layout when you open a blank presentation in PowerPoint. It comprises two text placeholders: the first for the presentation title and the second for a subtitle.

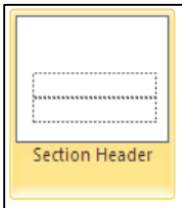

The ***Title Only*** layout is the same as a ***Title Slide*** except that it doesn't have a subtitle placeholder.

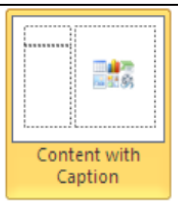

The ***Title and Content*** layout is the most commonly-used layout. It comprises a title placeholder and a content placeholder. Click on ***Click to add text*** to type a bulleted list.

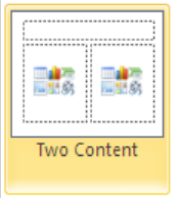

The ***Blank*** layout is just that – blank.

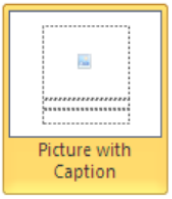

The ***Section Header*** layout is ideal for slides that introduce new sections within the presentation. It includes two placeholders: a title placeholder and a text placeholder.

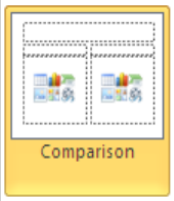

The ***Content with Caption*** layout has a title and caption placeholder on the left and a content placeholder on the right.

The ***Two Content*** layout has a title placeholder and two content placeholders that appear side-by-side.

The ***Picture with Caption*** layout has a title placeholder, a caption placeholder and a placeholder for images.

The ***Comparison*** layout has a title placeholder, two text placeholders and two content placeholders.

13.3.4. PowerPoint Screen menus

Restore Down/Maximize button, and close

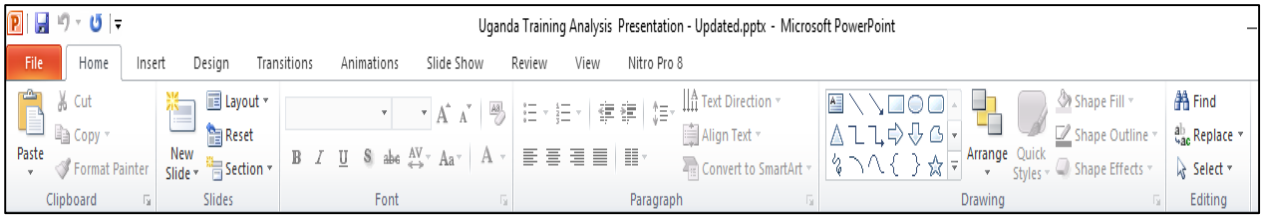

These three buttons serve the same function in all Windows programs.

Quick Access Toolbar Toolbar

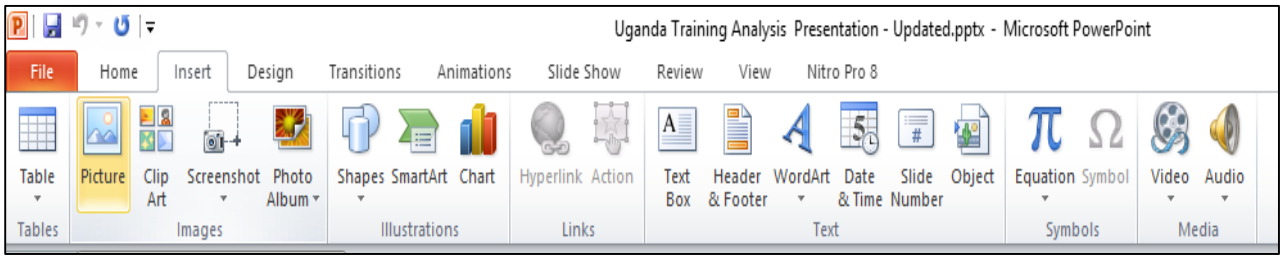

Home Menu

Sub-menus

1) Clipboard: Common commands frequently used are found; Paste, Cut, Copy, format Painter
2) Slides: Create/Insert a new Slide, Change layout, Reset a slide setting, Delete a slide.
3) Font: Change Font type and Size, Font formatting (Bold, Underline Italics) etc
4) Paragraphs: Paragraph formatting commands (Bulleting, Numbering, Alignment, Columns, Indenting
5) Drawing: Free hand drawing tools
6) Editing: Find, Replace and Select commands

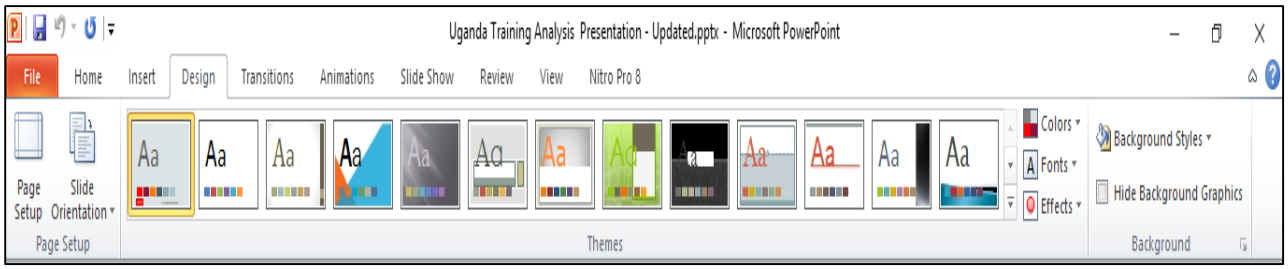

Insert Menu

Sub-Menus

1) Tables: For inserting a table
2) Images: Inserting a picture, Clip Art, Photos
3) Illustrations: Inserting Shapes, Smart Art, Charts
4) Links: For inserting Hyperlinks (Urls)
5) Text: Inserting Text Boxes, Headers & Footers, Date & Time, Slide Number, Object etc
6) Symbols: Inserting Equations, Symbols
7) Media: Video, Audio

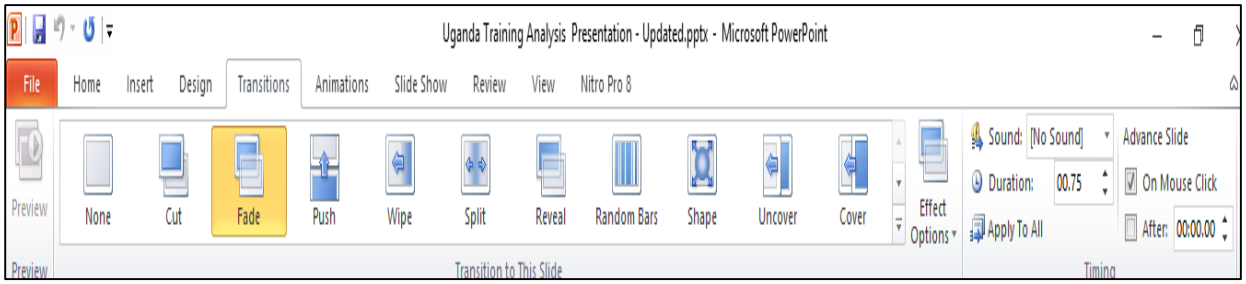

Design Menu

Sub-menus

1) Page Setup: Page Setup, Slide Orientation
2) Themes: Different slides themes options
3) Background: Slides background styles options, Hide background Graphics

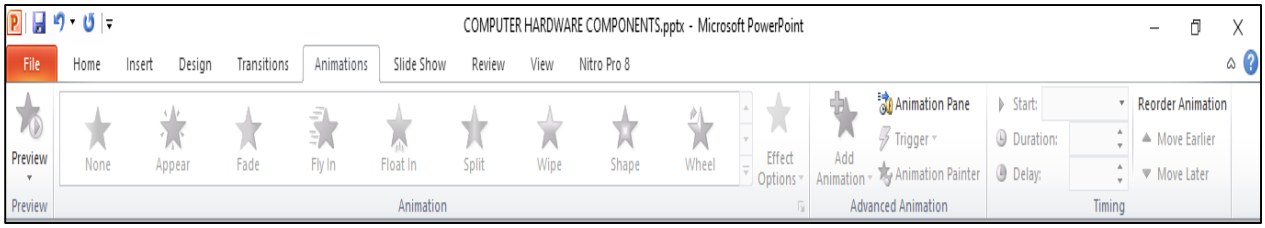

Transition

Sub-menus

1) Preview
2) Transition to this Slide
3) Timings:

Animation

Creating visual effects on slides

Sub-menus

1) Preview
2) Animation
3) Advanced Animation
4) Timings:

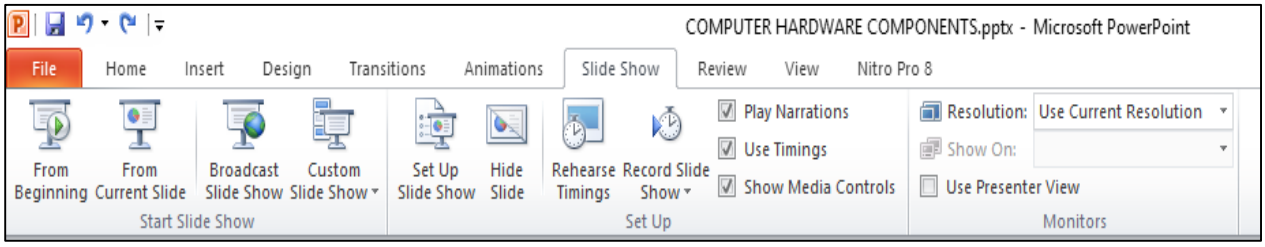

13.4. Difference Between Slide Transition and Animation

Slide transitions are the animation effects that are applied to whole slide whereas animation effects are applied to objects (text, shape, picture etc.) on a slide. For a slide you can have only one transition effect while each object on the slide can have multiple animation effects.

Transition effects appear in PowerPoint slideshow view when slides change from one to the next. Like animation effects we can control the speed of each slide transition effect, and we can also add music or sound. Video below should help you understand the difference:

Transition and animation effects provide visual impact and grab the audience's attention but when to use them and when not entirely depends upon your content and target audience. It's advisable not to overdo animations or slide transitions and also to stick to one transition effect throughout the slideshow because your audience may find it annoying and distracting. A balanced use of animations and slide transitions can lead to effective presentations which will keep the audience attentive and awake

Slide Show Menu

Sub-menus

Start Slide Show

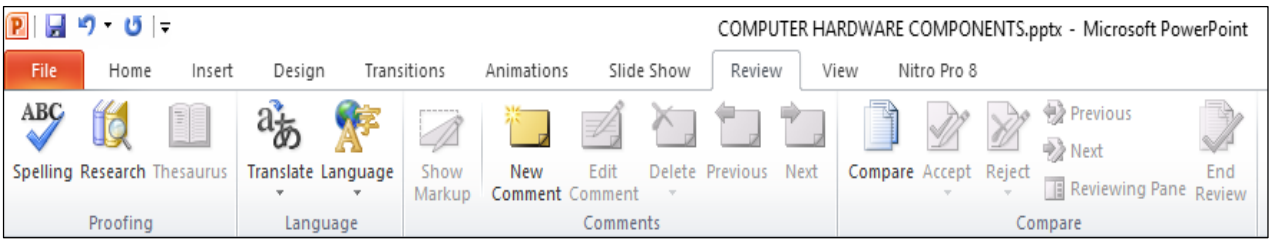

- From Beginning
- From Current Slide
- Broadcast Slide Show
- Custom Slide Show

Set Up

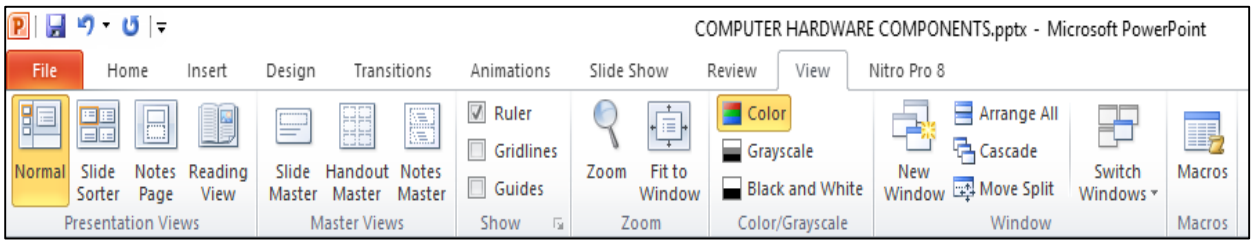

- Set up Slide Show
- Hide Slide
- Rehearse Timings
- Record Slide Show

Monitors

   - Normal
   - Slide Sorter
   - Notes page
   - Reading View
2) Master Views
   - Slide Master

- Handout Master
- Notes Master

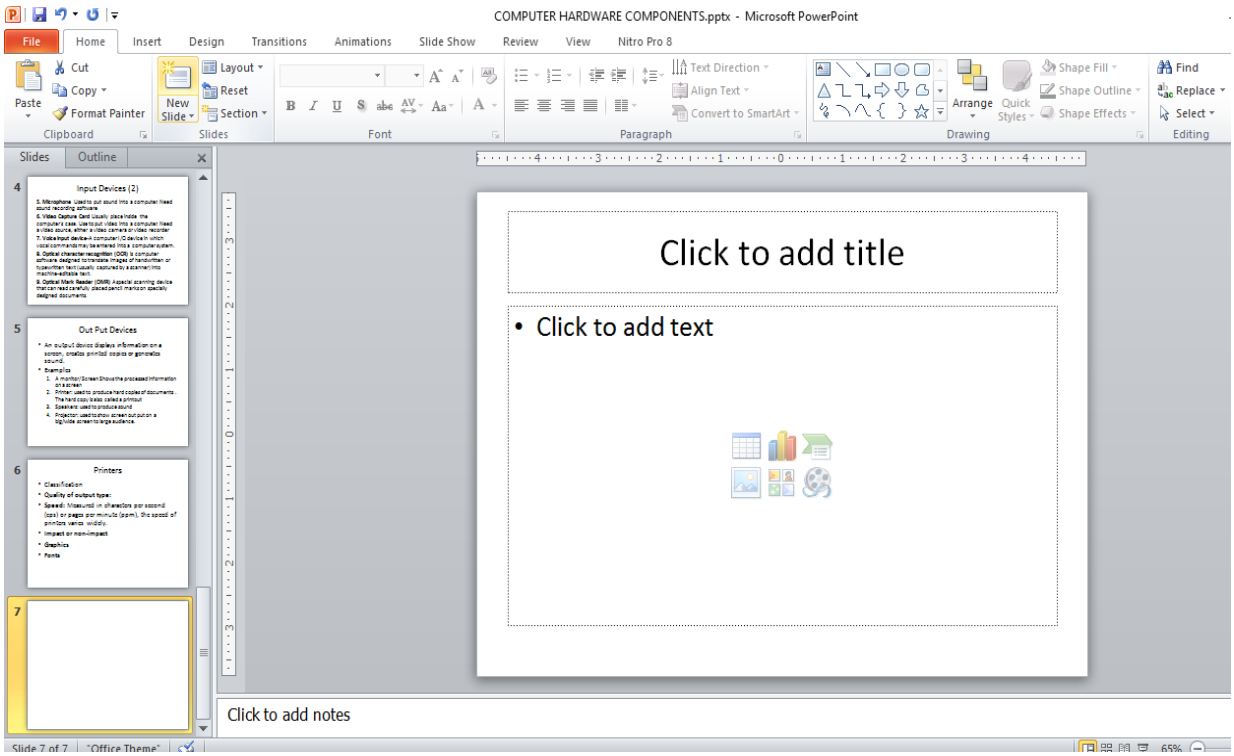

3) Show
4) Zoom
5) Color/Grayscale
6) Window
7) Macros

13.5. Adding and Deleting Slides

When you create a presentation, you add a slide by clicking the New Slide button in the Slides group on the Home tab. By default in a new presentation, a slide added after the title slide has the Title and Content layout. Thereafter, each added slide has the layout of the preceding slide.

Adding a Slide Steps

1. Click New Slide Icon in the Home Menu to add a new slide (Ctl+M)
2. Type in the Slide Title and slide content.
3. Repeat steps 3 and 4 for each new slide.

If you want to add a slide with a different layout, you can select the layout you want from the New Slide gallery.

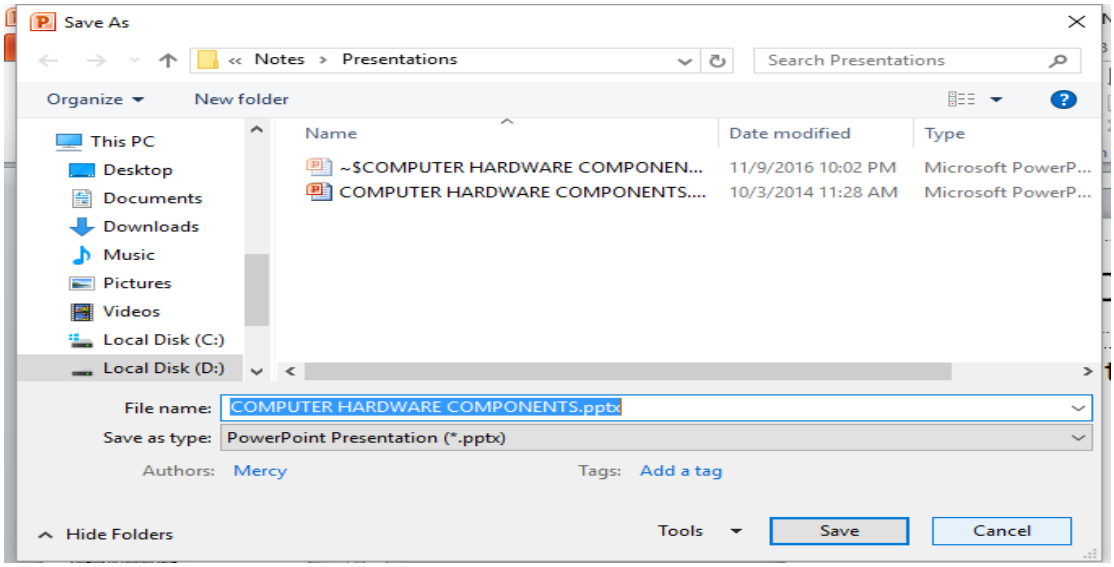

N.B: You can put as many slides as desired.

Deleting A slide

1) Select the Slide
2) Click Delete command

13.6. Saving a Presentation

1. Select File
2. Select Save As or Save menu as appropriate
3. Select the location to save the file
4. Type in the Name or Accept the name if saving an existing file name)
5. Accept the selected Save As Type - PowerPoint Presentation(*.pptx)
6. Click Save Button

13.7. Adding and Formatting text

Add text.

Normally the easiest way to add text to a slide is to type directly into any placeholder that accommodates text. However when you want to add text outside a placeholder you use “Text Box tool on the drawing toolbar.

Changing the font and color of the text

1. Highlight the text to be formatted
2. In the Home Menu, Select Font sub-menu then click font size Icon
3. Choose the desired font size color e.t.c
4. Click okay.

Add, change or remove a bullet

After you create a bulleted text, you can change the look of the bullets: their size, shape, color, e.t.c. To change a bullet, you need to highlight the text associated with the bullets. (You cannot highlight a bullet).

1) Highlight the text
2) In the Home Menu, Select Font sub-menu then select bullets Icon
3) Choose from the variety of bullets and click
4) Click okay

Adding a special text effect

You can add special effects to text by using the "word Art" tool on the drawing toolbar. You rotate, sketch, shadow or fill it with color using the "Word Art" toolbar.

1) From the Text sub-menu of the Insert Menu, select Word Art
2) Choose the shape of the word art and click okay
3) Type the text you want to add special effects after deleting "Your text here"

13.8. Formatting a Slide

Colors and designs are added to slides in a presentation for enhancement. They also help in capturing the attention of the audience. You can either add a background color, apply design or both.

Applying background

1. Choose the slide you want to apply background (if you have several) by scrolling.
2. In the Design Menu choose background and click.
3. In the drop down list choose the color desired (click more colours to view more)
4. Click apply.

Applying a Slide Theme

Theme: a combination of colors, fonts, formatting, graphics, and other elements that gives the presentation a coherent look

Steps

1. With the presentation Open
2. Select the required Design Theme from the Design Menu, Themes Sub-menu
3. The Selected Theme will be applied to all the Presentation Slides

13.9. Rearranging Slides and Sections

After you have created several slides, whether by adding them and entering text or by importing them from another presentation, you might want to rearrange the order of the slides so that they effectively communicate your message. You can rearrange a presentation in three ways.

1) On the Slides tab, you can drag slides up and down to change their order.
2) On the Slides tab, you can move entire sections up or down in a presentation.

13.10. Working with different Views

A slide can be looked at in different angles. These views help a lot while working on your presentations. To access the views, click view from the menu bar. The most common views are:

Presentation View

1) **Normal Slide:** Views individual slide.
2) **Slide Sorter:** Arranges the Slides on the Screen using the Landscape format
3) **Notes Page:** Display the notes section of each slide, one slide at a time
4) **Reading View:** Display the slide on a full screen/window (Press Escape to return to edit mode)

Master Views

1) Slide Master: Displays the Slide using the Master Slide format/theme
2) Handout Master: Presents the slides using the handout format
3) Notes Master: Presents each slide together with the notes in one screen

13.11. Working with Objects

Objects in PowerPoint could be any of the following

- Clip Arts
- Tables and graphs from other applications e.g. Excel
- Paint brush pictures
- Media clips and many more

PowerPoint comes with its own set of pictures in the clip art gallery. The clip art gallery includes a wide variety of clip arts that makes it easy for you to dress up your presentation with professionally designed images. You will find everything from maps to people and from buildings to scenic backgrounds.

Inserting pictures in your presentation

1. From the insert menu point to pictures
2. You can choose from the different sources i.e. clipart gallery, scanner, file etc.
3. From the source you have chosen, chose the picture and click insert.

Inserting Auto Shapes

1. From the Draw menu click auto shapes
2. Move to desired category
3. Choose the shape and click
4. After the mouse pointer changes shape, click and drag at the insertion position.

13.12. Animation

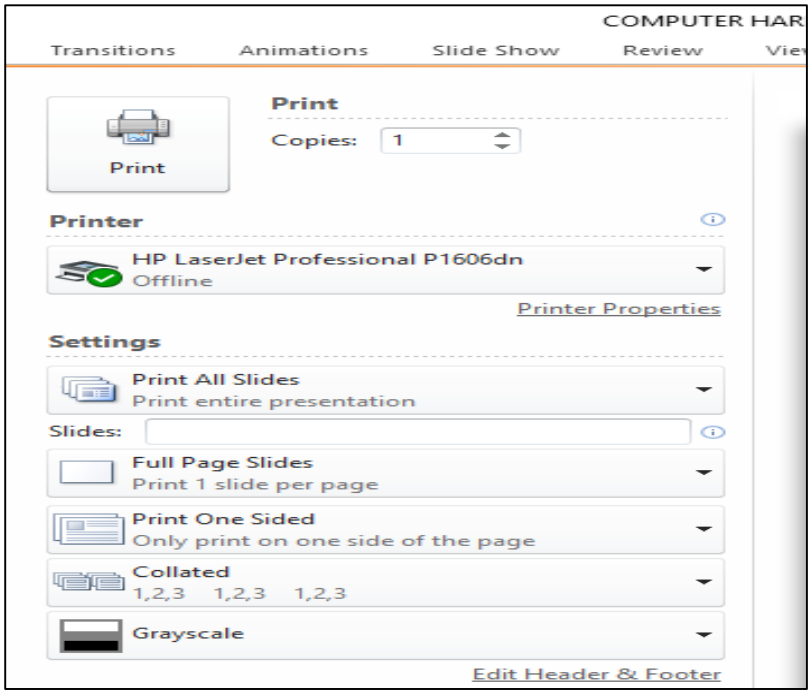

You can animate text, graphics sounds, movies, and other objects on your slides so as to focus on important points, control the flow of information, and add interest to your presentation. You can have each main bullet point appear independently of others, or you can have objects appear progressively, one after another.

You can set up the way you want each bullet point or object to appear on your slide e.g. to fly in from the left and whether you want other bullets or objects to dim or change color when you add a new element. You also change the order of timing of your animation.

13.13. PRINTING

You can print your entire presentation either in black and white or color.

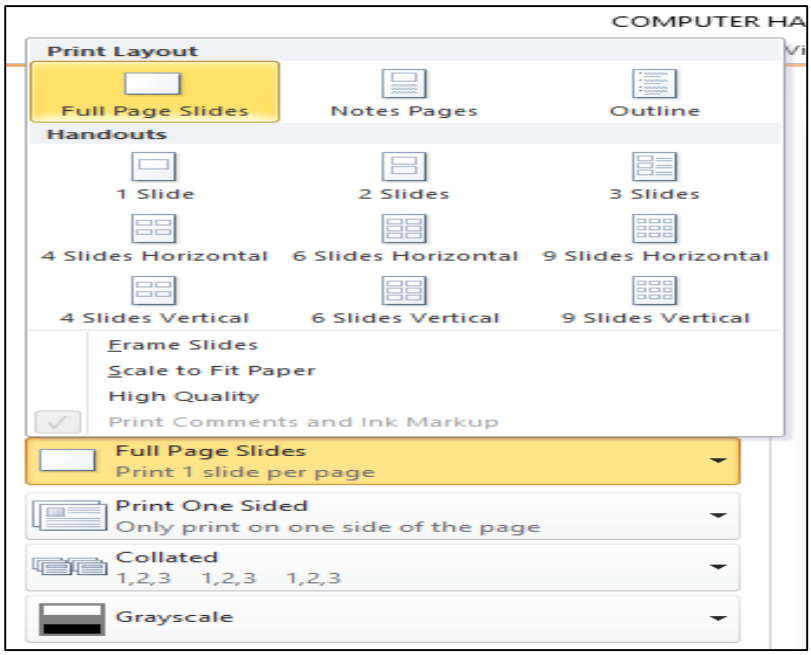

1. Open the presentation you want to print.
2. Click File,
3. Click print

- Select or set the required parameters
- Click Print Icon

To Print Multiple Slides in a Page

1) Click Full Page Slide
2) Select the respective Style

13.14. Margins

PowerPoint does not have fixed margins as in word processing programs. You can place text and objects right up to the edge of a slide. You align objects by resizing their placeholders.
