## MIS and Decision-Making

## MIS and Decision-Making: Reading assignment (individual work)

## MIS and Decision-Making: Discussion Questions

**Case Summary:**
Huduma Centres implements a management information systems that integrated fragmented services into one-stop centres.
Required
Discuss how MIS supports efficiency and service delivery in Huduma Centres.

Analyze how Huduma Kenya's MIS can support decision-making at both operational and strategic levels.

Describe some of the security challenges could arise in managing integrated government services through Huduma Centres, and how can MIS address them.

**Levels of Decision-Making**

- At the operational level, how can MIS help hospitals allocate resources such as beds, staff, and medicine more efficiently?

- For tactical decisions, what kind of MIS reports would a university management board need to plan student admissions and staffing?

- At the strategic level, how can MIS support long-term decisions such as hospital expansion or a university's transition to blended learning?

**Decision-Support Techniques**

- How can decision-support systems (DSS) using "what-if" or simulation models help hospital administrators respond to disease outbreaks?

- In what ways can predictive analytics in MIS guide universities in forecasting student enrollment trends?

- Discuss how visualization dashboards aid decision-makers in both hospitals and universities to reduce complexity and make quicker decisions.

**Role of MIS in Reducing Uncertainty**

- How does MIS reduce uncertainty in emergencies such as sudden patient surges in hospitals or unexpected exam timetable clashes in universities?

- What role does real-time MIS data play in minimizing errors in decision-making in health care and higher education?

- In what ways can MIS help both institutions comply with government regulations and reporting requirements, thereby reducing risk?

Each group presents 3–4 key MIS contributions to better decision-making in their assigned sector.
